PROFESSIONAL SUMMARY

Technology operations and Operational Excellence leader with 19 years of experience at Maersk, including nearly a decade leading service reliability, operational governance and enterprise application portfolios. Proven track record improving availability, reducing operational risk, driving engineering accountability and embedding reliability practices across global technology organisations. Experienced partnering with executive stakeholders, governing strategic vendors and supporting technology transformation initiatives.

SELECTED ACHIEVEMENTS

- Reduced infrastructure spend from €8M to €6M.
 - Governed 90 applications including 21 mission-critical services.
 - Maintained 99% availability supporting 4,000+ global users.
-

EXPERIENCE

Senior Portfolio Manager

2024 – 2026

Maersk Line · Madrid, Spain

Led Operational Excellence for a portfolio of 90 enterprise applications, including 21 mission-critical services, partnering with executive and engineering leaders to improve reliability, resilience, operational risk management and cost efficiency across an organisation of 200+ engineers and contractors.

- Established Operational Excellence governance across 14 engineering teams, introducing executive reporting, strategic roadmaps and common reliability standards for 90 enterprise applications.
- Drove portfolio-wide cost optimisation initiatives, contributing to a reduction in annual infrastructure spend from €8M to €6M through improved transparency, accountability and engineering ownership.
- Governed strategic technology partner relationships representing more than €5M in annual spend, supporting contract negotiations, renewals and performance management to ensure delivery quality and operational alignment.
- Performed technology due diligence and operational readiness assessments for strategic partnerships and acquisitions, identifying integration risks and rationalisation opportunities.
- Established biannual portfolio-wide innovation programmes, generating more than 20 initiatives per cycle and enabling multiple solutions to progress from proof of concept into production delivery.
- Built bespoke internal tooling using AI-assisted development to automate Operational Excellence reporting, delivering semi-automated weekly updates to 14 engineering teams and leadership.

Senior Technology Operations / Service Owner

2019 – 2024

Maersk Line · Maidenhead, UK → Madrid, Spain

Owned operational performance and service reliability for a portfolio of 5 enterprise applications (3 mission-critical), supporting over 4,000 global users in a 24/7 environment across mainframe, on-premises, and cloud platforms. Applications served as critical master data systems for global operations. Led operational delivery through a distributed vendor engineering team of approximately 9 engineers.

- Sustained 99% availability across mission-critical applications, supporting continuous global operations.
- Maintained major incident recovery times below two hours through structured incident coordination and vendor governance.
- Owned end-to-end incident, problem, and change management, coordinating release cycles from weekly deployments to quarterly major changes.

- Defined and operated service continuity and disaster recovery processes, including annual testing and maintained RTO/RPO commitments.
- Engaged business owners and tech engineering managers to prioritise improvements and align delivery to annual operational plans.
- Led risk identification and operational resilience activities including dependency mapping, and mitigation planning with technical stakeholders.
- Supported major application lifecycle initiatives including end-of-life upgrades, system modernisation, and multi-month transformation programmes.
- Led a large-scale integration programme involving over 3 million assets, ensuring service continuity and alignment with existing enterprise platforms.

Application Support Analyst

2017 – 2019

Maersk Line · Maidenhead, UK

Provided technical support and operational troubleshooting for enterprise applications in a global environment, working across incident resolution, application maintenance, vendor coordination, and end-user support.

- Diagnosed and resolved application incidents, performing root cause analysis and implementing corrective actions to reduce recurring operational impact.
- Monitored application performance and managed maintenance activities including patches, version upgrades, and operational updates.
- Collaborated with vendors, IT teams, and business stakeholders to support enhancements, manage support processes, and gather functional and technical requirements.

Cross Trade & Special Cargo - Customer Service

2007 – 2017

Maersk Line · Madrid, Spain

Delivered end-to-end customer service and operational coordination for complex international cargo flows, specialising in high-complexity shipments (deep-frozen, reefer, hazardous, military, OOG). Developed strong process discipline and cross-functional coordination skills in a high-variability, compliance-critical environment.

- Supported the standardisation and outsourcing of customer service processes to global service centres, improving delivery consistency and scalability.
- Participated in Process Excellence initiatives to improve operational efficiency and standardise workflows across customer service operations.

SKILLS & TOOLS

Core Competencies

Operational Excellence • Service Reliability • Service Ownership • Operational Risk Management • Business Continuity & Disaster Recovery • Executive Reporting • Technology Governance • Vendor Management • Procurement & Commercial Governance • Capacity Planning • Strategic Roadmapping

Tools

ServiceNow • Jira • Confluence • Monitoring & Observability Platforms • Docker • AI-assisted development

LANGUAGES

Spanish Native · **English** Bilingual / Full professional proficiency
